

Intelligent pool systems

The healthy pool that saves you money!

Safety

We understand nothing is more important to you than family. Don't worry, we feel the same. All EnviraFlo components are completely safe and comply with the most rigorous Australian and international standards to ensure your pool is always a fun and safe space. You can enjoy your pool knowing your family will always be safe with an EnviraFlo system.

Quality and reliability

We believe you deserve the most efficient circulation system for your new pool and we continue to invest in research and development to ensure we deliver on our promise of absolute quality.

All EnviraFlo components are manufactured in the USA for consistent quality, durability and unrivalled performance. EnviraFlo circulation systems are also an outstanding long-term investment because your energy savings are locked in for the life of your pool and multiply as energy prices increase.

Backed by family values

The EnviraFlo range of efficient circulation systems is proudly brought to you by Cooke Industries, a long-standing business founded on true family values. Visit us online to learn more about EnviraFlo and the options which will help make your new pool a pleasure to own.

The efficiency dilemma

Maintaining healthy pool water for your family to swim in requires good circulation and standard pool pumps can consume around \$1000 of power every year to do so.

Standard pool using a single speed pump

Standard pool using a variable speed pump at low speed

Variable speed pumps are appealing because they present an opportunity to reduce energy costs. Whilst they can turn over a sufficient volume of water at lower pump speeds, skimming power and circulation is compromised. Without sufficient skimming and circulation, water balance is difficult to maintain, algae forms in dead spots and maintenance costs increase significantly.

This dilemma forces you to accept either high energy costs or poor circulation!

Enviraflor is the answer

Enviraflor's revolutionary approach to pool plumbing solves the efficiency dilemma by generating healthy circulation and effective skimming at low pump speeds.

Circulate water more efficiently

The secret to Enviraflor's energy efficiency is its patented venturi skimmer which uses just a fraction of return water to generate a skimming action equal to that created by a pump on high speed.

Circulate the water that's difficult to move

The water in the deep part of your pool is typically the most difficult to move. Enviraflor draws all suction through a drain in your pool floor to improve circulation and water quality. This process also eliminates those irritating cold water pockets lurking in the depths of your pool.

Complete circulation

Circulation in an Enviraflor pool is superior to a standard pool because we're drawing water from the pool floor and efficiently skimming the surface at the same time. Enviraflor is the only system that maintains effective surface skimming and improves sanitation dispersal whilst a variable speed pump is operating at low speed. With Enviraflor you can have good circulation and low energy costs!

Why choose Enviraflor?

It makes sense to install an Enviraflor system into your new pool. Enviraflor is suitable for all concrete and fibreglass pools and is the only system that can combine effective surface skimming and healthy pool water with very low energy costs.

- ✓ Maintain healthy circulation
- ✓ Energy savings for the life of your pool
- ✓ Powerful surface skimming
- ✓ Improve sanitation dispersal
- ✓ Easy pool ownership
- ✓ Reduce heating and treatment costs

Enviraflor options to suit your pool

We understand all pools and ownership expectations are different, so we've developed a range of options to cater for your individual site and lifestyle requirements. Consider the options below to make sure your new Enviraflor pool is everything you want it to be.

Multiply the savings

Large pools typically require additional skimmers and even more power to maintain healthy circulation.

A large Enviraflor pool is even more efficient as additional venturi skimmers multiply your energy savings.

The invisible drain

The exclusive AVSC drain with its tile/pebble lid can be used to blend seamlessly with your pool interior, thus making it almost invisible.

Capture heavy debris

Heavy debris sites pose no problem for Enviraflor. A LeafVac debris canister can be installed to capture heavy debris, reduce maintenance and protect your pool pump.

Cleaning your pool

Enviraflor enhances any cleaning system you choose for your pool. You can even make life easier by adding pop-up cleaning heads and upgrading Enviraflor to become a self-cleaning pool.

Our Enviraflor pool saves us hundreds of dollars every year and the water quality has been immaculate throughout dust storms, heat waves, autumn falls and heavy use.
